--1. (Four Times Amended) An information displaying system including a server apparatus and an information displaying apparatus capable of accessing said server apparatus, for displaying information corresponding to a geographical location on said information displaying apparatus, comprising:

information displaying means;

91

display commanding means pre-assigned with a unique identification code for accepting a user's selecting operation and outputting a commanding signal to have said information displaying means display the information when the display commanding means is selected by the user's selecting operation;

first data storing means for storing map drawing element data corresponding to a geographic location;

second data storing means for storing said geographic location and for storing first attribute information so that said geographic location and said first attribute information correlate with said identification code, wherein said first attribute information is business related information corresponding to said identification code;

third data storing means for storing advertisement data and second attribute information corresponding to said advertisement

data;

Sub

cont

map drawing command means for accepting said commanding signal sent from said display commanding means, for searching a geographic location corresponding to said identification code pre-assigned to said information displaying means from said second data storing means, searching said map drawing element data corresponding to said searched geographical location from said first data storing means, and controlling said information displaying means to draw map information using said searched map drawing element data; and

Y1
cont

advertisement display commanding means for accepting said commanding signal sent from said display commanding means, searching an advertisement data from said third data storing means, and controlling the information displaying means to display advertisement information using said searched advertisement data, wherein

said advertisement display commanding means comprises:

a correspondence determination section for determining a correspondence relationship between said first attribute information and said second attribute information; and

an advertisement searching section for determining said second attribute information corresponding to said commanding signal sent from said display commanding means using said determined correspondence relationship, and searching said

Sub E
advertisement data using said determined second attribute information, and wherein

cont
said information displaying means displays both said map information and said advertisement information at said same display screen, said map information and said advertisement information being generated by said map drawing commanding means and said advertisement display commanding means, respectively.

Sub E
--9. (Four Times Amended) An information providing apparatus including a server apparatus and an information displaying apparatus capable of accessing said server apparatus, for displaying information corresponding to a geographic location on said information displaying apparatus, the apparatus comprising:

information displaying means;

display commanding means pre-assigned with a unique identification code for accepting a user's selecting operation and outputting a commanding signal to have said information displaying means display the information when the display commanding means is selected by the user's selecting operation;

first data storing means for storing map drawing element data corresponding to said geographic location;

second data storing means for storing said geographical location and for storing first attribute information, so that

said geographical location and said first attribute information correlate with said identification code, wherein said first attribute information is business related information corresponding to said identification code;

third data storing means for storing advertisement data and second attribute information corresponding to said advertisement data;

map drawing commanding means for accepting said commanding signal sent from said display commanding means, searching said geographic location corresponding to said identification code pre-assigned to said information displaying means from said second data storing means, searching said map drawing element data corresponding to said searched geographical location from said first data storing means, and controlling said information displaying means to draw map information using said searched map drawing element data; and

advertisement display commanding means for accepting said commanding signal sent from said display commanding means, searching an advertisement data from said third data storing means, and controlling the information displaying means to display advertisement information using said searched advertisement data, wherein

said advertisement display commanding means comprises:

a correspondence determination section for determining a

correspondence relationship between said first attribute information and said second attribute information; and

an advertisement searching section for determining said second attribute information corresponding to said commanding signal sent from said display commanding means using said determined correspondence relationship, and searching said advertisement data using said determined second attribute information, and wherein

said information displaying means displays both said map information and said advertisement information at said same display screen, said map information and said advertisement information being generated by said map drawing commanding means and said advertisement display commanding means, respectively.

--16. (Four Times Amended) An information providing method for providing information corresponding to a geographical location to a user information displaying apparatus via a network using a server, comprising the steps of:

pre-assigning a display commanding means with a unique identification code, for accepting a user's selecting operation and outputting a commanding signal to have said information displaying apparatus display the information when the display commanding means is selected by the user's selecting operation;

storing map drawing element data corresponding to

geographical locations in first data storing means;

Sub E3 Cont
storing said geographical locations and storing first attribute information in second data storing means so that said geographical location and said first attribute information correlate with said identification code, wherein said first attribute information is business related information corresponding to said identification code;

Sub Cont
accepting a commanding signal sent from a display commanding means, searching a geographical location corresponding to the identification code pre-assigned to the information displaying means from the second data storing means, searching the map drawing element data corresponding to the searched geographical location from the first data storing means, and controlling the information displaying means to draw map information using the searched map drawing element data;

accepting the commanding signal sent from the display commanding means, searching an advertisement data from the third data storing means, and controlling the information displaying apparatus to display advertisement information using the searched advertisement data;

determining a correspondence relationship between the first attribute information and the second attribute information;

determining the second attribute information corresponding to the commanding signal sent from the display commanding means
